> I build technologies that make privacy, security and complex technical research more accessible.

My career spans 30 years across cybersecurity, digital forensics, research and development, and technology leadership. I combine executive experience with hands-on software engineering: I led a 40-member technical team and a national digital forensics laboratory at ONS, founded and ran Eagle Eye Digital Solutions, and led cybersecurity and R&D at National Security Services Group (NSSG), an Omani cybersecurity company now part of Dreamlab Technologies, before serving as its Deputy CEO and Acting CEO, where I led the company to Cybersecurity Company of the Year and was named one of Arabian Business's Top 50 CEOs of 2023.

Today I build and run five systems, led by Kodachi OS, the privacy-focused Linux operating system I have developed since 2013 and whose core Rust code I still write. TechRadar has ranked it the #1 Linux distribution for privacy and security six years running, 2020 to 2025.

01
EXECUTIVE IMPACT
Strategy and growth across three organisations

Across three organisations, two of them with 50+ employees, I developed strategies and built projects no competitor offered, each tied to its organisation's growth. At one of them I turned around revenue, market position and talent. At the others, my work included confidential government programmes.

OMR 500K
single major project secured
at one organisation, whose annual revenue had been OMR 2,000

#1
Cybersecurity Company of the Year
OER 2023 and Muscat Daily 2024, under my leadership

3
organisations, senior leadership roles
strategy and unique projects behind each one's growth

50+
employees
in two of the three organisations

LEADERSHIP RECORD

- ✓ At NSSG, now part of Dreamlab Technologies: rose from Chief Cyber Security and R&D to Deputy CEO and Acting CEO, and led the company to Cybersecurity Company of the Year (OER 2023, Muscat Daily 2024) and Excellence in Building National Talent in Cyber Security (Muscat Daily 2024)
- ✓ Strategic partnerships under my leadership: Group-IB (memorandum signed at GISEC Global 2024, Dubai), Resecurity, and Risk Associates for PCI DSS in Oman's financial sector
- ✓ As Acting CEO of NSSG: strategic planning, system architecture, information security and vendor management
- ✓ Arabian Business Top 50 CEOs of 2023
- ✓ As founder of EEDS: a global client base within a few years of launch, including several sectors in Oman

THE TURNAROUND AT ONE ORGANISATION

	BEFORE	AFTER
Commercial scale	An OMR 100 project, OMR 2,000 annual revenue	**A single project worth OMR 500,000**
Market position	A name no one mentioned	**Award-winning market leadership**
Talent	No applicants, and few knew the company	**Strong candidates competing to join**

HOW IT WAS DONE

Commercial growth
Business development, new revenue streams and contract negotiation that took one organisation from an OMR 100 project to a single project worth OMR 500,000.

Financial accountability
Budget ownership, with projects delivered on time and within budget.

Talent and culture
High-performance teams built on continuous learning; at one organisation, strong candidates competed to join a company no one had applied to before.

Quality and governance
Quality assurance and information security enforced in delivery, with SLA management, as a project worth OMR 500,000 demands.

Strategic innovation
Projects competitors did not offer, and the strategies behind them, from research and development, each aligned with its organisation's growth, including confidential government programmes.

02 HIGHLIGHTS OF EXPERTISE

Twelve areas, one connected practice

01 Cybersecurity strategy and team leadership

02 Digital, mobile and internet forensics

03 Linux privacy and system hardening

04 Penetration testing and security auditing

05 Research and development management

06 Secure software engineering (Rust, Bash, PHP, Python)

07 Privacy networking: VPN, Tor, encrypted DNS

08 System architecture, server and cloud management

09 Stakeholder, vendor and contract management

10 Compliance, SLAs and business process assessment

11 AI assisted engineering and algorithmic trading research

12 Technical writing and public speaking

03 SKILL CONSTELLATION

5 groups, 30 skills, grouped by practice

Security & forensics
6 skills

- Penetration testing
- Digital forensics
- Mobile forensics
- Incident analysis
- TLS and PKI
- Security auditing

Privacy engineering
6 skills

- VPN
- Tor routing
- Encrypted DNS
- Kill switches
- System hardening
- Release signing

Engineering
7 skills

- Rust
- Bash
- PHP
- Python
- SQL
- Delphi
- Visual Basic

Platforms
5 skills

- Debian and Linux
- Windows Server
- Apache and Nginx
- Cloud VPS fleets
- MySQL and MariaDB

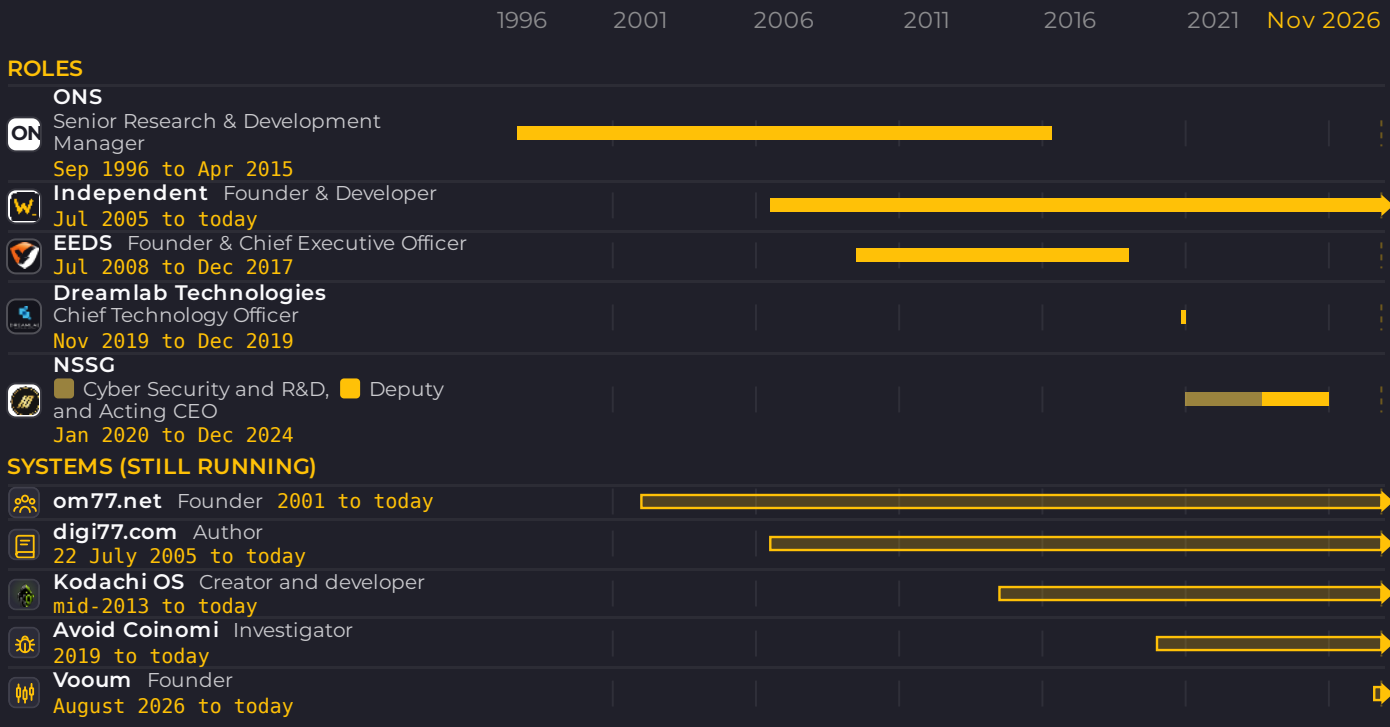
Leadership
6 skills

- Strategy
- R&D management
- Team building
- Vendor oversight
- Contract negotiation
- Executive advisory

04

CAREER SUMMARY

Thirty years of leadership, September 1996 to today



ROLES

ONS
Senior Research & Development Manager
Sep 1996 to Apr 2015

Independent Founder & Developer
Jul 2005 to today

EEDS Founder & Chief Executive Officer
Jul 2008 to Dec 2017

Dreamlab Technologies
Chief Technology Officer
Nov 2019 to Dec 2019

NSSG
Cyber Security and R&D, Deputy and Acting CEO
Jan 2020 to Dec 2024

SYSTEMS (STILL RUNNING)

om77.net Founder 2001 to today

digi77.com Author
22 July 2005 to today

Kodachi OS Creator and developer
mid-2013 to today

Avoid Coinomi Investigator
2019 to today

Vooum Founder
August 2026 to today

EDUCATION

Education
SQU diploma, then Griffith University
2000 to 2005

Arrows mark the systems I still run today.

National Security Services Group (NSSG), now part of Dreamlab Technologies

Muscat, Oman Jan 2020 to Dec 2024

Deputy CEO and Acting Chief Executive Officer Sep 2022 to Dec 2024

Chief Cyber Security and R&D Jan 2020 to Sep 2022

Rose from Chief Cyber Security and R&D to Deputy CEO and Acting CEO (September 2022), leading the company's strategy, growth and delivery and taking it to Cybersecurity Company of the Year in 2023 and again in 2024.

- Led NSSG to Cybersecurity Company of the Year at the OER Corporate Excellence Awards 2023, accepting the award from HE the Minister of State and Governor of Muscat.
- Cyber Security Company of the Year again in 2024, together with Excellence in Building National Talent in Cyber Security, at the Muscat Daily Cyber Security & Cloud Awards; earlier, the COMEX 2023 award for Excellence in Technology.
- Signed a memorandum of understanding with Group-IB at GISEC Global 2024 in Dubai, and, under my leadership, NSSG formed strategic partnerships with Resecurity and with Risk Associates for PCI DSS compliance services to Oman's banking, financial services and insurance sector.
- Named one of Arabian Business's Top 50 CEOs of 2023.
- PassRay, an in-house product of the R&D I led, was Highly Commended as Outstanding Cybersecurity Product of the Year at Intersec 2024.
- NSSG achieved CREST accreditation for penetration testing and ISO 27001 certification.
- Research and development products: PassRay (exposed and weak enterprise passwords), DCapsula (DMARC email authentication reporting), HashStrike (password auditing and recovery, with its own hardware rig) and the Linux Kodachi Kit.

PassRay

Jan 2022 to Sep 2023

Finds enterprise passwords that are exposed in public breaches or easy to guess.

DCapsula

Dec 2020 to Aug 2021

DMARC email authentication reporting against spoofing and phishing.

HashStrike

Jun 2020 to Aug 2021

Password auditing and recovery for security engagements and digital forensics.

HashStrike rig

Jun 2020 to Aug 2021

HashStrike's hardware bundle: a GPU workstation built for it.

Dreamlab Technologies AG

Switzerland Nov 2019 to Dec 2019

Chief Technology Officer Nov 2019 to Dec 2019

Chief Technology Officer of the Swiss cybersecurity company.

dreamlab.net

Eagle Eye Digital Solutions (EEDS)

Muscat, Oman Jul 2008 to Dec 2017

Founder & Chief Executive Officer Jul 2008 to Dec 2017

Founded and led an IT solutions firm specializing in penetration testing, digital forensics, software development and security training. Defined the firm's strategy and product direction, managed operations and client engagements, and developed its security applications.

- Built a client base that included Omani public and private sector organizations.
- Created Linux Kodachi (2013), the privacy operating system that became Kodachi OS.
- Built StealthWalker, a Delphi Windows privacy application combining VPN connectivity, encrypted networking and DNS protection.
- Built SSL Eye, which compares TLS certificate fingerprints across nodes in several countries to detect interception; it won first place in the ITU Arab Regional Cybersecurity Center innovation competition.
- Delivered black-box and white-box penetration testing that measured clients' ability to detect and respond to internal and external attacks.
- Started digi77.com to publish security, forensics, server and development research.

ONS

Muscat, Oman Sep 1996 to Apr 2015

Senior Research & Development Manager Sep 1996 to Apr 2015

Led a 40-member technical team responsible for IT security projects, delivery, quality assurance and issue resolution. Formed research teams in internet security and digital forensics and oversaw penetration, vulnerability, FAT, SAT and acceptance testing.

- Established a national digital forensics laboratory and standardized its processes.
- Led development of a technology tool recognized by Nokia Siemens Networks (Munich) as the primary solution for a major milestone.
- Designed a security product recognized by Elaman.
- Served as digital security consultant and trainer, and built database applications that improved workflow and productivity.

05

FIVE SYSTEMS BUILT AND RUN TODAY

Still running, the oldest since 2001

Kodachi OS

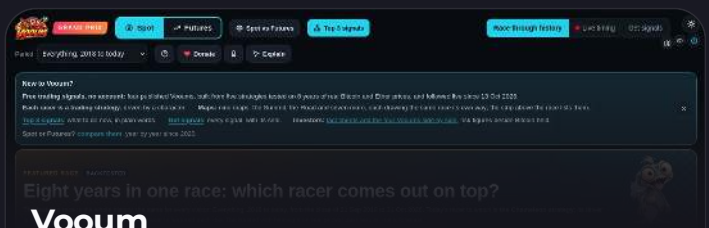
SINCE 2013 · KODACHI.CLOUD

Creator and developer

A privacy-focused Linux operating system I started in mid-2013 and first released as Linux Kodachi on 20 October 2013. It brings together VPN and Tor routing, encrypted DNS, system hardening and a live security dashboard. Kodachi OS 10 is based on Debian 13 with a Rust core: I write the core Rust stack and sign every release.

- TechRadar ranked it the #1 Linux distribution for privacy and security six years running, 2020 to 2025.

Source code



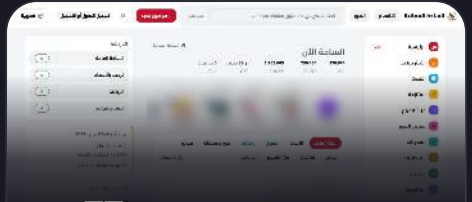
Vooum

SINCE 2026 · VOOUM.COM

Founder

A trading-signal system built on trading strategies I have developed since 2017, automated with its own website since August 2026: Bitcoin and Ether strategies race through eight years of real prices, are checked live, and publish sealed paper signals. Backtested and paper results are not actual trading performance and do not guarantee future results.

- Not financial advice.



om77.net

SINCE 2001 · OM77.NET

Founder

The Omani community platform (الساحة العمانية): forums, blogs, galleries, files and a calendar.

- More than 7.7 million posts and 170,000 members.

digi77.com

SINCE 2005 · DIGI77.COM

Author

My research and publishing system, online since July 2005: cybersecurity, Linux, Rust, Bash, automation and technology leadership, with source-code examples and the archive of my earlier projects.

- 49 published articles.

Avoid Coinomi

SINCE 2019 · AVOID-COINOMI.COM

Investigator

An evidence archive documenting my investigation into the handling of wallet recovery phrases during Coinomi desktop restore testing: network captures, the on-chain trail and SHA-256 hashed files for readers to examine.

- Maintained since 2019.

PROJECTS AND TOOLS

12 projects, 2004 to 2025

Linux Kodachi Kit

`NSSG · Feb 2021 to Aug 2021`

A complete privacy kit that NSSG offered in 2021, built around Linux Kodachi: a laptop running Kodachi with the hardware and printed guides a privacy-minded user needs, packed in a hard case. It is a historical product, no longer offered.

THE KIT INCLUDED

- Lenovo ThinkPad L13 Yoga with Linux Kodachi installed
- Nanuk 923 laptop hard case
- Linux Kodachi introductory booklet
- Privacy and cybersecurity guide
- Mission Darkness Faraday bag for phones
- SanDisk Ultra Fit flash drive
- OnlyKey hardware password manager
- YubiKey 5 NFC security key
- Aegis Secure Key encrypted drive
- PortaPow USB data blocker
- GL.iNet GL-XE300 Puli wireless router
- GL.iNet GL-MV1000W Brume-W VPN gateway
- RF detector: the K-68 (July 2021 kit) or the WE-Direct anti-spy detector (earlier kit)

WHAT IT GAVE THE USER

- Laptop traffic routed through VPN and Tor with encrypted DNS (Kodachi OS)
- Hardware keys for logins and password storage
- An encrypted USB drive and a USB data blocker for charging
- A Faraday bag that cuts a phone off from all signals
- Travel and VPN routers for untrusted networks
- An RF detector to check a room for transmitters

Anonymity Verifier — 2025

Browser-based tool on kodachi.cloud that shows the network and browser signals visible to websites: Tor status, proxy signals, WebRTC exposure.

kodachi.cloud

SSL Eye — 2017

TLS certificate fingerprint comparison across distributed nodes; first place, ITU-ARCC innovation competition.

digi77.com

Shy Girl — 2013

Linux reconnaissance script that brings together domain information-gathering tools for authorized penetration testing.

GitHub

StealthWalker — 2013

Delphi Windows privacy application: VPN connectivity, encrypted networking and DNS protection.

digi77.com

Folder Monitor and Webfile Retriever — 2013

Visual Basic utilities built for client requirements: change alerts for files and folders, scheduled downloads.

digi77.com

Auto-IP-Changer — 2010

Automates scheduled changes among the IP addresses assigned to a Windows server.

GitHub

E-Tornado — 2008

Remote administration system with a Delphi server and Visual Basic client.

GitHub

FX-Storm — 2008

Forex analysis automation: pivot points, Camarilla levels, Fibonacci, charting and market news.

GitHub

MSN Tool — 2008

Historical utility for recovering forgotten MSN Messenger passwords.

GitHub

Mail Robot — 2007

Consolidates any number of .eml messages into Outlook PST files.

GitHub

E-Bouncer — 2004

Proxy validation: classifies proxies by anonymity and protocol support.

digi77.com

Major disclosures

FEB 2019 — **Coinomi wallet**

Investigated how the Coinomi desktop wallet handled recovery phrases during restore testing; the network captures and on-chain findings are published at avoid-coinomi.com.

DEC 2019 — **Apple iOS Mail**

Found the iOS Mail client leaking the local network IP, ISP IP, VPN public and local IPs and the iOS version to mail receivers and providers; Apple was informed.
